Nolan Yee

(281) 780-3981 | nolanyee99@gmail.com | Austin, TX | github.com/nolanqyee | linkedin.com/in/nolanqyee | nolanyee.cv

EDUCATION

The University of Texas at Austin GPA: 4.0

Bachelor of Science in Computer Science

Forty Acres Scholar - Selected as 1 of 20 (from 90k+) recipients of UT Austin's premier full-ride, merit-based scholarship

Relevant Coursework: Operating Systems, Object-Oriented Programming, Computer Architecture, Data Structures, Linear Algebra, Statistics, Computational Biology, Discrete Math, Calculus I-III

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C++, C, TypeScript, SQL, HTML/CSS, PostgreSQL, MongoDB, PHP, MATLAB, R, Dart

Frameworks & Libraries: React, Node.js, Express.js, NextJS, Flask, Spring, PyTorch, Bootstrap, Tailwind, Flutter, OpenAI API

Technologies & Tools: Git, GitHub, Docker, CI/CD, Firebase, AWS, Vercel, Supabase, Redis, PostHog, JUnit, Bash, REST APIs

EXPERIENCE

Abode Money | Austin, TX **May 2026 - September 2026**

Software Engineering Intern

- Engineered lifecycle marketing infrastructure for 25+ customer events using Postgres triggers, workers, and scheduled jobs
- Migrated 70K+ daily events to PostHog, unifying fragmented product analytics and recovering 100% of ad-blocked traffic
- Ran gated A/B experiments to iterate on frontend UX across user onboarding and checkout, improving conversion up to 50%
- Built AI harnesses to generate and validate county-specific tax appeal logic, cutting regressions 80% and manual dev time 95%

Bubble | Austin, TX **October 2025 - Present**

Founding Engineer

- Built a prompt-first relationship management app, translating natural-language input into structured networking workflows
- Implemented an LLM action agent that executes CRUD and query operations with 95% accuracy, prompting users with context
- Optimized the contact data layer with normalized schemas and Redis caching, reducing average query latency by 45%

Texas Convergent | Austin, TX **September 2025 - April 2026**

Software Engineer

- Engineered a cross-platform React Native app for music collaboration, managing the full lifecycle from MVP to investor pitch
- Optimized feed performance by 40% through an infinite-scroll implementation, handling 3000+ media uploads via Firebase
- Collaborated in a 7-person Agile team to ship core messaging and workspace features across 12 weekly development sprints

EchoWellness | Houston, TX **June 2023 - April 2025**

President & Lead Web Developer

- Developed a full-stack fundraising platform using React and PHP, increasing donor outreach by 30% and site traffic by 120%
- Automated donor outreach systems for 150+ users via PHP, reducing manual coordination by 80% and raising $10,000+
- Engineered modular UI components with Bootstrap to streamline registrations, resulting in a 35% increase in donations

PROJECTS

Singularity Business Website | Flask, GPT-3 (OpenAI API), Python, Firebase, jQuery, CSS, HTML

- Created a full-stack business website prototype to demo GPT-3 product, automating 500+ simulated customer support queries
- Designed responsive UI/UX with jQuery, CSS, and Flask templates, reducing frontend redundancy by 40% and load time by 25%
- Engineered a context-aware chatbot using Python and OpenAI API, trained on company data for real-time user interaction

Via - UT Campus Navigation Assistant | Flutter, Supabase, PostgreSQL, PostGIS

- Built a UT student navigation app featuring an immutable data model for normalizing and discovering crowdsourced GPS routes
- Developed a spatial discovery engine with PostGIS and GIST indexing, enabling sub-200ms queries across campus-scale datasets
- Implemented a ranking algorithm using temporal decay and social voting to prioritize routes based on user criteria

Music Genre Classification Neural Network | PyTorch, Python, NumPy, Pandas, Scikit-learn

- Built a PyTorch neural network to classify song genres by audio features, achieving 72.4% accuracy across 1,000+ song samples
- Engineered a data preprocessing pipeline using NumPy and Scikit-learn for automated normalization and feature encoding
- Fine-tuned architecture via GridSearchCV, implementing ReLU, Batch Normalization, and Dropout to mitigate overfitting

ARM System Emulator | C, ARM Assembly, Make

- Developed a 5-stage AArch64 pipeline emulator with 30+ opcodes, 7 memory segments, and ELF-loader testbench validation
- Implemented combinational hazard detection and 3-level value forwarding, eliminating 60-75% of load-use pipeline stalls
- Designed an LRU-managed L1 cache achieving 95-99% hit rates and 0.1-1.2 CPI overhead across 40M+ cycle simulations

LEADERSHIP

Texas Product Engineering Organization **September 2025 - Present**

Engineering Lead

- Selected as 1 of 10 (from 250+) to solve complex problems using novel, nonprofit software solutions in the Austin community
- Developed and taught 9-week full-stack curriculum to 20+ students covering Git, React, system design, and agentic best practices

HONORS

Y Combinator Startup School 2026 (top 5% of 30k+) | 4x AIME Qualifier (top 2.5%) | USA Computing Olympiad Gold (top 7.5%)
